## Octal 3-State Bus Transceivers and D Flip-Flops <br> High-Speed Silicon-Gate CMOS

The IN74AC652 is identical in pinout to the LS/ALS652, HC/HCT652. The device inputs are compatible with standard CMOS outputs; with pullup resistors, they are compatible with LS/ALS outputs.

These devices consists of bus transceiver circuits, D-type flipflop, and control circuitry arranged for multiplex transmission of data directly from the data bus or from the internal storage registers. Direction and Output Enable are provided to select the read-time or stored data function. Data on the A or B Data bus, or both, can be stored in the internal D flip-flops by low-to-high transitions at the appropriate clock pins (A-to-B Clock or B-to-A Clock) regardless of the select or enable or enable control pins. When A-to-B Source and B-to-A Source are in the real-time transfer mode, it is also possible to store data without using the internal D-type flip-flops by simultaneously enabling Direction and Output Enable. In this configuration each output reinforces its input. Thus, when all other data sources to the two sets of bus lines are at high impedance, each set of bus lines will remain at its last state.

The IN74AC652 has noninverted outputs.

- Outputs Directly Interface to CMOS, NMOS, and TTL
- Operating Voltage Range: 2.0 to 6.0 V
- Low Input Current: $1.0 \mu \mathrm{~A}, 0.1 \mu \mathrm{~A} @ 25^{\circ} \mathrm{C}$
- High Noise Immunity Characteristic of CMOS Devices

## LOGIC DIAGRAM

PIN ASSIGNMENT

PORT - Outputs Source/Sink 24 mA

MAXIMUM RATINGS*

| Symbol | Parameter | Value | Unit |
| :---: | :---: | :---: | :---: |
| V cc | DC Supply Voltage (Referenced to GND) | -0.5 to +7.0 | V |
| Vin | DC Input Voltage (Referenced to GND) | -0.5 to $\mathrm{V}_{\mathrm{Cc}}+0.5$ | V |
| Vout | DC Output Voltage (Referenced to GND) | -0.5 to $\mathrm{V}_{\mathrm{CC}}+0.5$ | V |
| IIN | DC Input Current, per Pin | $\pm 20$ | mA |
| Iout | DC Output Sink/Source Current, per Pin | $\pm 50$ | mA |
| Icc | DC Supply Current, Vcc and GND Pins | $\pm 50$ | mA |
| $\mathrm{P}_{\mathrm{D}}$ | Power Dissipation in Still Air, Plastic DIP+ SOIC Package+ | $\begin{aligned} & \hline 750 \\ & 500 \end{aligned}$ | mW |
| Tstg | Storage Temperature | -65 to +150 | ${ }^{\circ} \mathrm{C}$ |
| TL | Lead Temperature, 1 mm from Case for 10 Seconds (Plastic DIP or SOIC Package) | 260 | ${ }^{\circ} \mathrm{C}$ |

*Maximum Ratings are those values beyond which damage to the device may occur.
Functional operation should be restricted to the Recommended Operating Conditions.
+Derating - Plastic DIP: - $10 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ from $65^{\circ}$ to $125^{\circ} \mathrm{C}$

$$
\text { SOIC Package: : }-7 \mathrm{~mW} /{ }^{\circ} \mathrm{C} \text { from } 65^{\circ} \text { to } 125^{\circ} \mathrm{C}
$$

RECOMMENDED OPERATING CONDITIONS

| Symbol | Parameter | Min | Max | Unit |
| :---: | :---: | :---: | :---: | :---: |

${ }^{*} V_{\text {IN }}$ from $30 \%$ to $70 \% V_{\text {cc }}$

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, Vin and Vout should be constrained to the range GND $\leq$ ( Vin $_{\text {IN }}$ or $\left.\mathrm{V}_{\text {out }}\right) \leq \mathrm{V}_{\text {cc }}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or $\mathrm{V}_{\mathrm{CC}}$ ). Unused outputs must be left open.
